

Amendment to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A method comprising:
hosting a first user and a second user;
transmitting a broadcast service to said first user;
receiving a broadcast request from said second user, said broadcast request requesting said broadcast service; and
transmitting said broadcast service to said second user; and
establishing a connection between the first user and the second user prior to receiving the broadcast request from the second user.
2. (Previously Presented) The method of claim 1, further comprising receiving a notification request from said first user after said transmitting of broadcast service to said first user, said notification request comprising:
information regarding said broadcast service being transmitted to said first user;
and
identification information of said second user for notifying said second user regarding said broadcast service being transmitted to said first user.
3. (Original) The method of claim 2, further comprising notifying said second user regarding broadcast service being transmitted to said first user before said receiving of broadcast request from said second user.
4. (Previously Presented) The method of claim 3, wherein said broadcast service is transmitted to said second user via a session initiation protocol server.

5. (Original) The method of claim 4, further comprising providing voice communication between said first user and said second user, said voice communication being simultaneous with said transmission of broadcast service to said second user.

6. (Original) The method of claim 5, wherein said first user receives broadcast service on a first wireless device.

7. (Original) The method of claim 6, wherein said first user receives voice communication over said first wireless device.

8. (Original) The method of claim 7, wherein said second user receives broadcast service on a second wireless device.

9. (Original) The method of claim 8, wherein said second user receives voice communication over said second wireless device.

10. (Original) The method of claim 9, wherein said first wireless device and said second wireless device are configured to receive Digital Video Broadcasting – Terrestrial signals.

11. (Original) The method of claim 10, wherein said first wireless device and said second wireless device are configured to communicate using session initiation protocol.

12. (Original) The method of claim 9, wherein said broadcast services comprise audio-visual content.

13. (Original) The method of claim 9, further comprising receiving broadcast services from at least one broadcaster connected therewith.

14. (Original) The method of claim 13, further comprising receiving broadcast content from at least one Internet service provider connected therewith.

15. (Currently Amended) A method comprising:
receiving a notification regarding availability of a broadcast service from a first user of a telecommunication network;
requesting the broadcast service from a broadcast service provider; and
receiving the requested broadcast service from said broadcast service provider,
wherein a simultaneous connection is established with said first user prior to receiving the notification and the simultaneous connection is maintained with said first user while obtaining the broadcast service, said simultaneous connection being used to transmit voice therebetween.

16. (Original) The method of claim 15, wherein said broadcast service is received via a telecommunication service provider.

17. (Previously Presented) The method of claim 16, wherein said notification comprises:
information regarding said broadcast service being transmitted to said first user;
and
identification information of said second user for notifying said second user regarding said broadcast service being transmitted to said first user.

18. (Original) The method of claim 17, wherein said broadcast service and said voice information are received on a wireless device, said wireless device equipped to receive Digital Video Broadcasting – Terrestrial signals, said wireless device further configured for session initiation protocol.

19. (Original) The method of claim 18, further comprising receiving download information regarding the requested broadcast service from said broadcast service provider before said receiving of the requested broadcast service.

20. (Original) The method of claim 19, wherein said broadcast service is in audio-visual format.

21. (Currently Amended) An apparatus comprising:
a memory unit; and
a processor in communication with said memory unit, said processor configured
for:
hosting a first user and a second user,
transmitting a broadcast service to said first user,
receiving a broadcast request from said second user, said broadcast request
requesting said broadcast service, ~~and~~
transmitting said broadcast service to said second user; and
establishing a connection between the first user and the second user prior
to receiving the broadcast request from the second user.

22. (Previously Presented) The apparatus of claim 21, wherein said processor
is further configured for receiving a notification request from said first user after said
transmitting of broadcast service to said first user, said notification request comprising:
information regarding said broadcast service being transmitted to said first user;
and
identification information of said second user for notifying said second user
regarding said broadcast service being transmitted to said first user.

23. (Previously Presented) The apparatus of claim 22, wherein said processor
is further configured for notifying said second user regarding broadcast service being transmitted
to said first user before said receiving of broadcast request from said second user.

24. (Previously Presented) The apparatus of claim 23, wherein said broadcast
service is transmitted to said second user via a session initiation protocol server.

25. (Previously Presented) The apparatus of claim 24, wherein said processor
is further configured for providing voice communication between said first user and said second
user, said voice communication being simultaneous with said transmission of broadcast service
to said second user.

26. (Previously Presented) The apparatus of claim 25, wherein said first user receives broadcast service on a first wireless device.

27. (Previously Presented) The apparatus of claim 26, wherein said first user receives voice communication over said first wireless device.

28. (Previously Presented) The apparatus of claim 27, wherein said second user receives broadcast service on a second wireless device.

29. (Previously Presented) The apparatus of claim 28, wherein said second user receives voice communication over said second wireless device.

30. (Previously Presented) The apparatus of claim 29, wherein said first wireless device and said second wireless device are configured to receive Digital Video Broadcasting – Terrestrial signals.

31. (Previously Presented) The apparatus of claim 30, wherein said first wireless device and said second wireless device are configured to communicate using session initiation protocol.

32. (Previously Presented) The apparatus of claim 29, wherein said broadcast services comprise audio-visual content.

33. (Previously Presented) The apparatus of claim 29, wherein said processor is further configured for receiving broadcast services from at least one broadcaster connected therewith.

34. (Previously Presented) The apparatus of claim 33, wherein said processor is further configured for receiving broadcast content from at least one Internet service provider connected therewith.

35. (Currently Amended) An apparatus comprising:
a memory unit; and
a processor in communication with said memory unit, said processor configured
for:
receiving a notification regarding availability of a broadcast service from a
first user of a telecommunication network,
requesting the broadcast service from a broadcast service provider, and
receiving the requested broadcast service from said broadcast service
provider,
wherein a simultaneous connection is established with said first user prior
to receiving the notification and the simultaneous connection is maintained with said first user
while obtaining the broadcast service, said simultaneous connection being used to transmit voice
therebetween.

36. (Previously Presented) The apparatus of claim 35, wherein said broadcast
service is received via a telecommunication service provider.

37. (Previously Presented) The apparatus of claim 36, wherein said notification
comprises:
information regarding said broadcast service being transmitted to said first user;
and
identification information of said second user for notifying said second user
regarding said broadcast service being transmitted to said first user.

38. (Previously Presented) The apparatus of claim 37, wherein said broadcast
service and said voice information are received on a wireless device, said wireless device
equipped to receive Digital Video Broadcasting – Terrestrial signals, said wireless device further
configured for session initiation protocol.

39. (Previously Presented) The apparatus of claim 38, wherein said processor
is further configured for receiving download information regarding the requested broadcast

service from said broadcast service provider before said receiving of the requested broadcast service.

40. (Previously Presented) The apparatus of claim 39, wherein said broadcast service is in audio-visual format.

41. (Currently Amended) A wireless device comprising:
a communication unit configured to communicate with a second communication device, said communication unit configured to support multimedia applications and configured to engage in high-speed data transfer;
a memory unit;
a receiver configured to receive stationary and portable reception of broadcast and data services; and
a processor in communication with said communication unit, said memory unit and said receiver, said processor configured to:
receive a notification from said second communication device regarding availability of a broadcast service being transmitted to said second communication device; and
request the broadcast service from a broadcast service provider,
wherein said communication unit establishes a connection with said second communication device prior to receiving said notification, and said communication unit and said receiver are being operational concurrently.
